

Basit Fayyaz

Software Engineering | Full-Stack Developer

Lahore, Pakistan

Phone: +92 322 5079898

Email: Basitfayyaz44@gmail.com

Portfolio: <https://basit-fayyaz.vercel.app>

Professional Summary

Full-Stack Developer with practical experience building modern web applications, admin dashboards, automation workflows, SEO-focused websites, and business systems. Skilled in Next.js, React, TypeScript, Tailwind CSS, Prisma, Neon Postgres, API development, Vercel deployment, and third-party integrations including WhatsApp Business Cloud API and Google APIs. Uses AI-assisted development workflows for planning, debugging, refactoring, and faster feature implementation.

Strong problem-solving, management, and execution skills with experience working on real business projects across plumbing services, luxury car hire, hospitality operations, and admin/booking systems.

Technical Skills

Frontend / Web Development

- Next.js 15 including App Router, Server Components, and `generateMetadata`
- React 19 with TypeScript
- Tailwind CSS v4 using `@theme inline` and modern utility-based design
- Responsive UI design for desktop, tablet, and mobile
- Accessibility-focused development including WCAG basics, skip links, and focus states
- Performance optimization including LCP improvements, lazy loading, `next/font`, and animation handling

Backend / Database

- Prisma ORM v5
- Neon Postgres database integration
- REST API route design
- Zod validation and request handling
- Rate limiting and secure API patterns
- Cron jobs using Vercel Cron and scheduled task workflows
- Authentication flows and admin dashboard architecture

SEO / Marketing Technology

- Schema.org JSON-LD implementation including LocalBusiness, FAQ, and Service schema
- Google Search Console API integration
- Programmatic SEO using area × service page structures
- Canonical strategy, sitemap, robots.txt, OpenGraph, and structured data optimization
- Local SEO for service-based businesses

Integrations

- WhatsApp Business Cloud API including templates, 24-hour window handling, and webhooks
- Google APIs including Google Search Console and Google Calendar
- Vercel deployment and edge/serverless functions
- PWA and Service Workers including cache versioning and auto-stamping

Development Workflow

- AI-assisted coding workflow for planning, debugging, refactoring, and feature implementation
- Code generation, review, and improvement using AI development tools
- Requirement analysis and conversion of business needs into working features

DevOps / Tooling

- Git and GitHub
- Vercel CI/CD deployment workflows
- Environment variable and secrets management
- Lighthouse audits
- Security headers including CSP and HSTS basics

Mobile Development

- React Native for mobile app projects including plumber and customer-facing app concepts

Soft Skills

- Problem solving
 - Management and task ownership
 - Project planning and execution
 - UK English content writing
 - Business workflow understanding
 - Booking system architecture
 - Invoice and quote generation using PDF/HTML
-

Selected Projects

Peterborough Plumbers — Service Business Website & Admin System

Website: peterboroughplumber.com

Built and worked on a modern service-business platform focused on local SEO, lead generation, quote/invoice workflows, WhatsApp automation, and admin operations.

Key Work:

- Developed SEO-focused pages using Next.js and structured metadata
- Implemented LocalBusiness, FAQ, and Service schema using JSON-LD
- Worked on admin workflows for quotes, invoices, customer handling, and service presets
- Integrated WhatsApp Business Cloud API for customer communication and templates
- Built automation concepts for quote follow-ups, booking reminders, and service workflows
- Improved performance, responsiveness, and technical SEO structure

LCH / Luxury Car Hire — Luxury Vehicle Hire Platform

Worked on a luxury car hire website and digital system focused on high-end vehicle presentation, lead capture, SEO, and marketing technology.

Key Work:

- Designed frontend sections for luxury car listings and business landing pages
- Supported SEO structure, metadata, OpenGraph, and performance optimization
- Worked with analytics and deployment workflows on Vercel
- Planned/administered systems for vehicle content, pricing visibility, and customer enquiry handling

Roomello — Hospitality / Airbnb Operations System

Worked on Roomello-related digital operations for short-term rental and Airbnb guest management.

Key Work:

- Planned systems for guest communication, booking operations, and customer service workflows
- Worked on hospitality-related admin and process documentation
- Supported automation ideas for guest support, check-in guidance, and operational task handling
- Designed content and digital workflows for improved guest experience

ADCH Site

Worked on website and business system development tasks for ADCH, including frontend structure, responsive design, deployment support, and business-focused web functionality.

Education

Software Engineering

University of Management and Technology — Lahore, Pakistan

Current Status: Employed

Strengths

- Ability to understand business requirements and convert them into working web systems
 - Strong focus on clean UI, responsive layouts, and practical user workflows
 - Experience with real-world business websites and admin systems
 - Good understanding of SEO, automation, integrations, and deployment
 - Comfortable working across frontend, backend, database, and third-party API layers
-
